How to install and activate

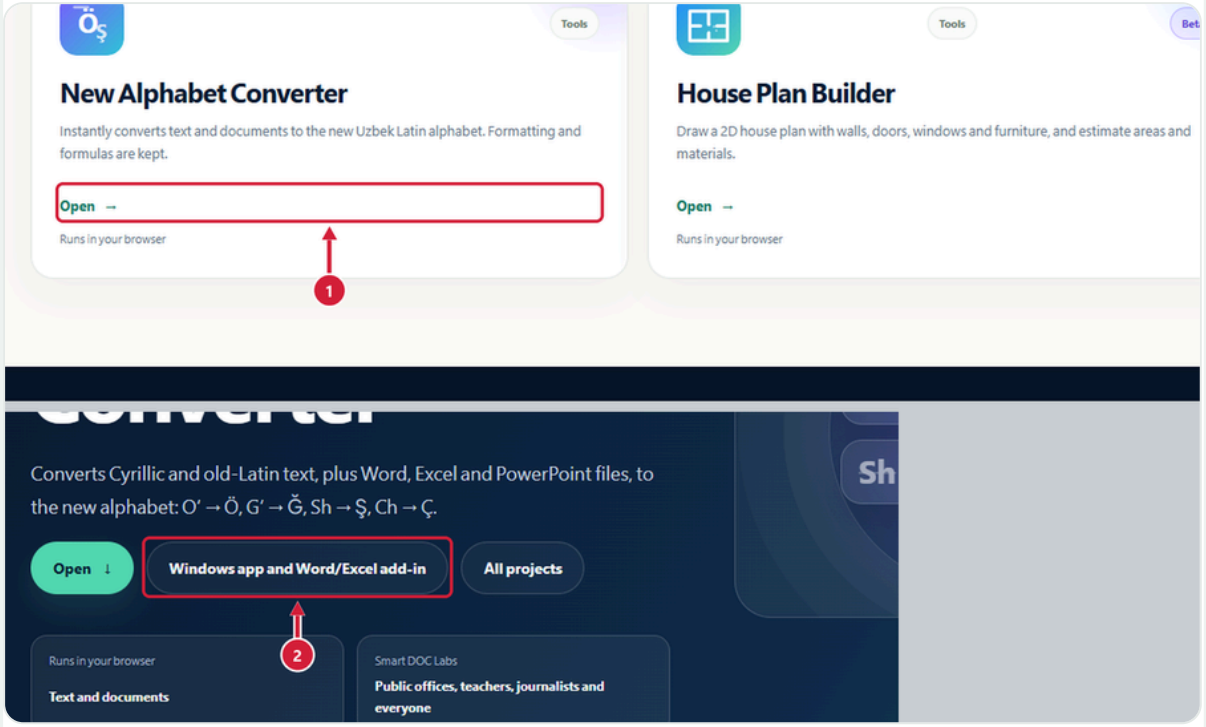

Quotation marks show app buttons (the app is in Uzbek), bold shows site buttons.

1. Download from the site

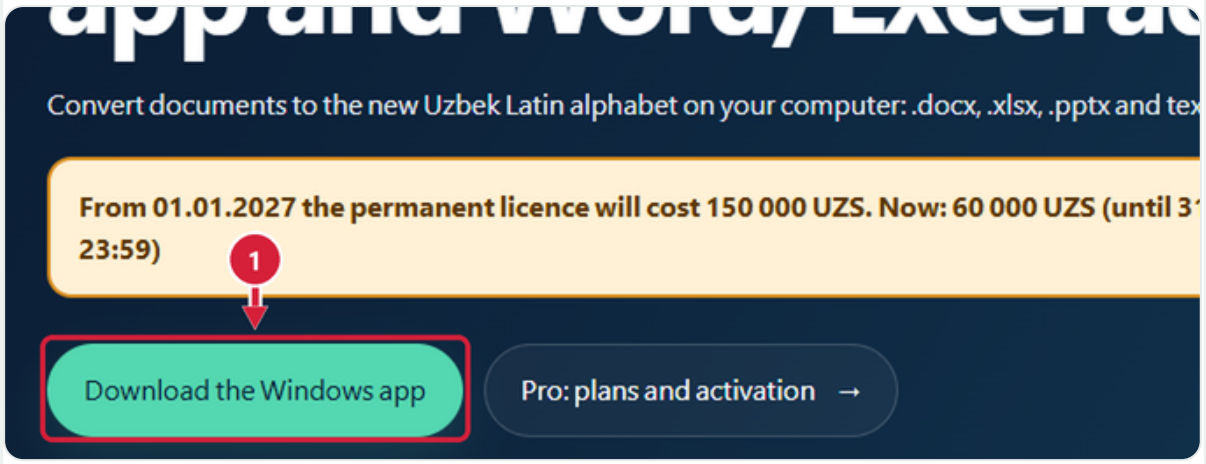

Open smartdoclabs.uz in your browser and go to the **Projects** section at the top.

On the new alphabet converter card press **Open**, then the link to the Windows app and Word/Excel add-in. Short way: type smartdoclabs.uz/en/alifbo in the address bar.

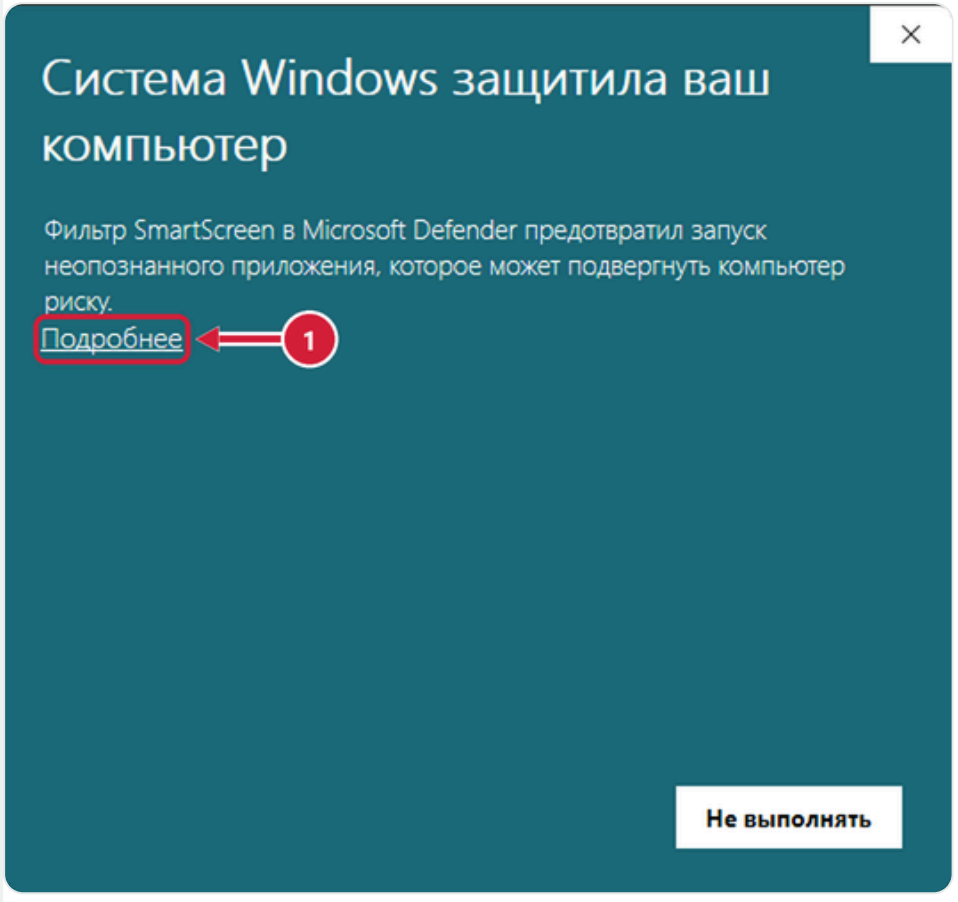

Press **Download the Windows app**: SmartDoc_Alifbo_Setup.exe downloads. If the browser warns that the file is rarely downloaded, choose to keep the file in the downloads list.

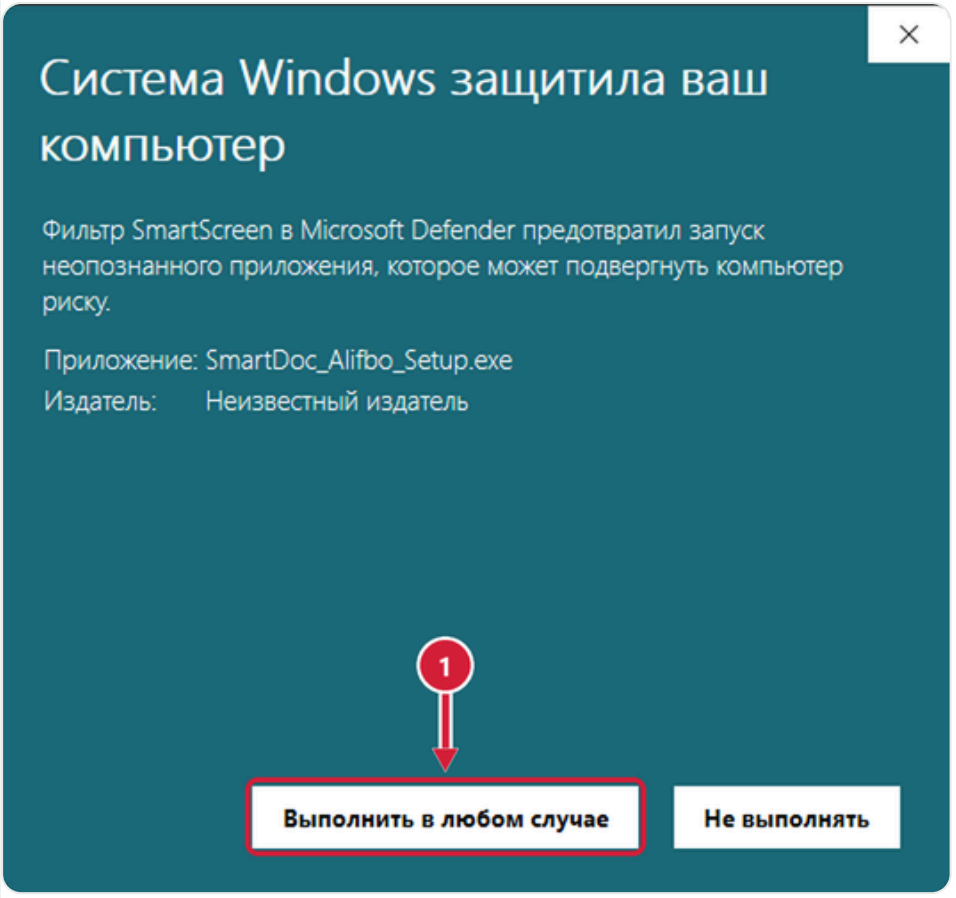

2. Install: the Windows warning is normal

Double-click the downloaded file. A blue window may appear: «Windows protected your PC» (shown in Russian in the picture). This is normal: the app is new and has no digital signature yet, so Windows does not recognise it. Continue only if you got the file from smartdoclabs.uz: press **More info**.

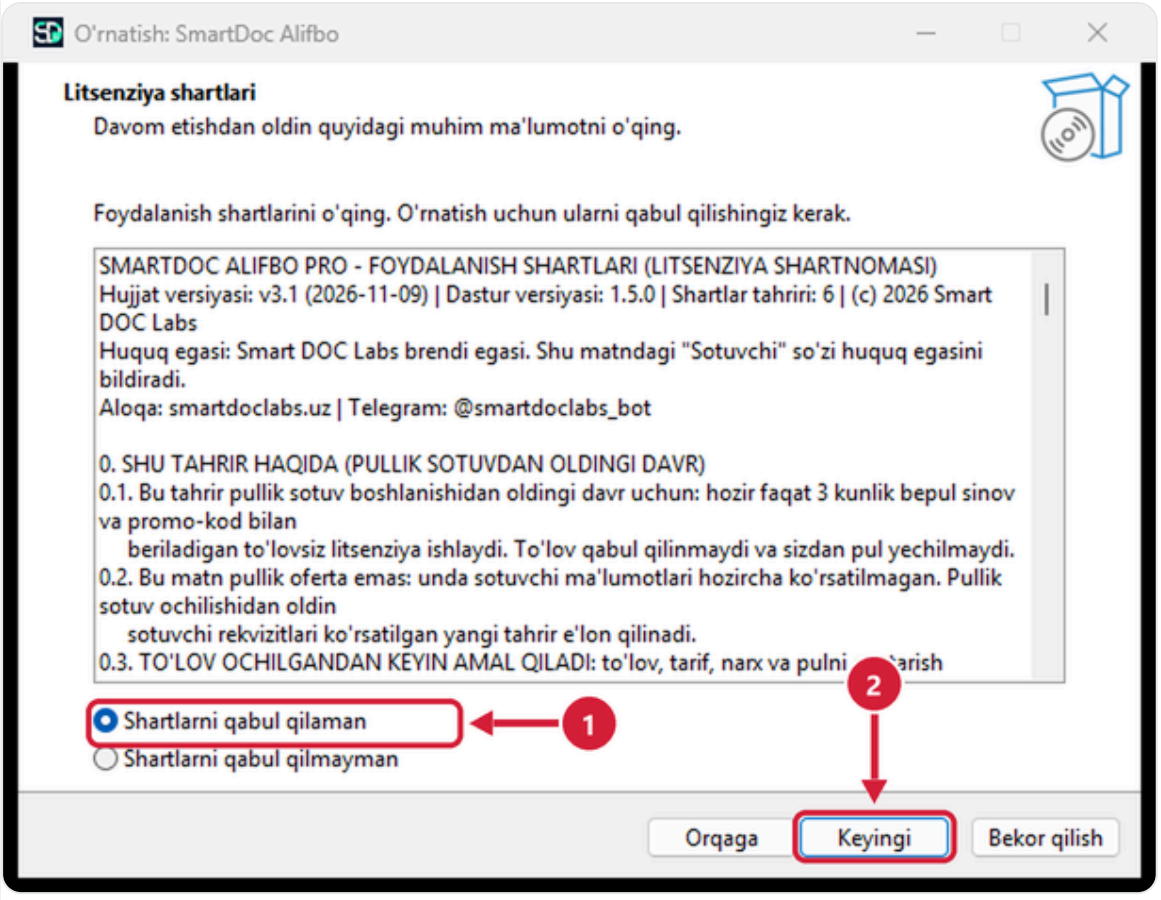

Then press **Run anyway**. You do not need to change Windows or antivirus settings.

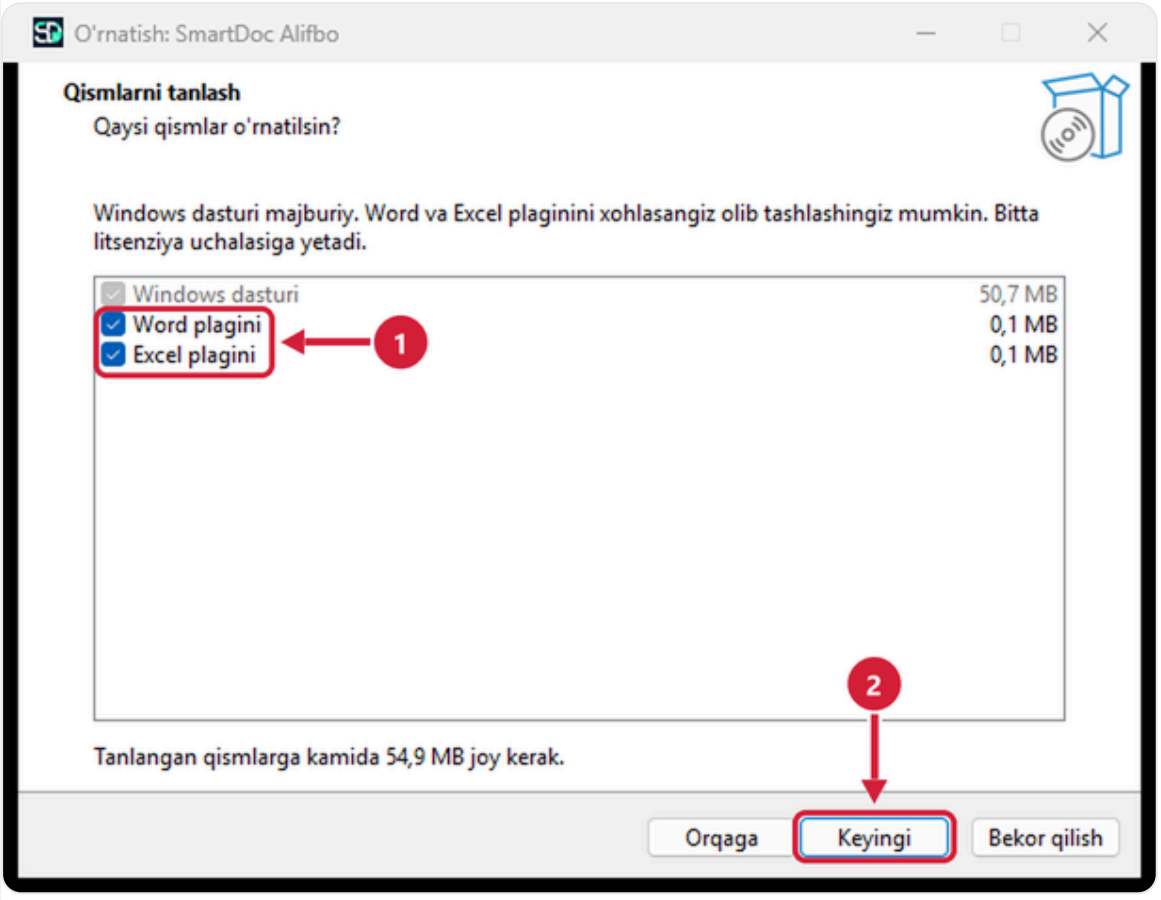

The installer opens. Read the warning and press «Keyingi» (Next).

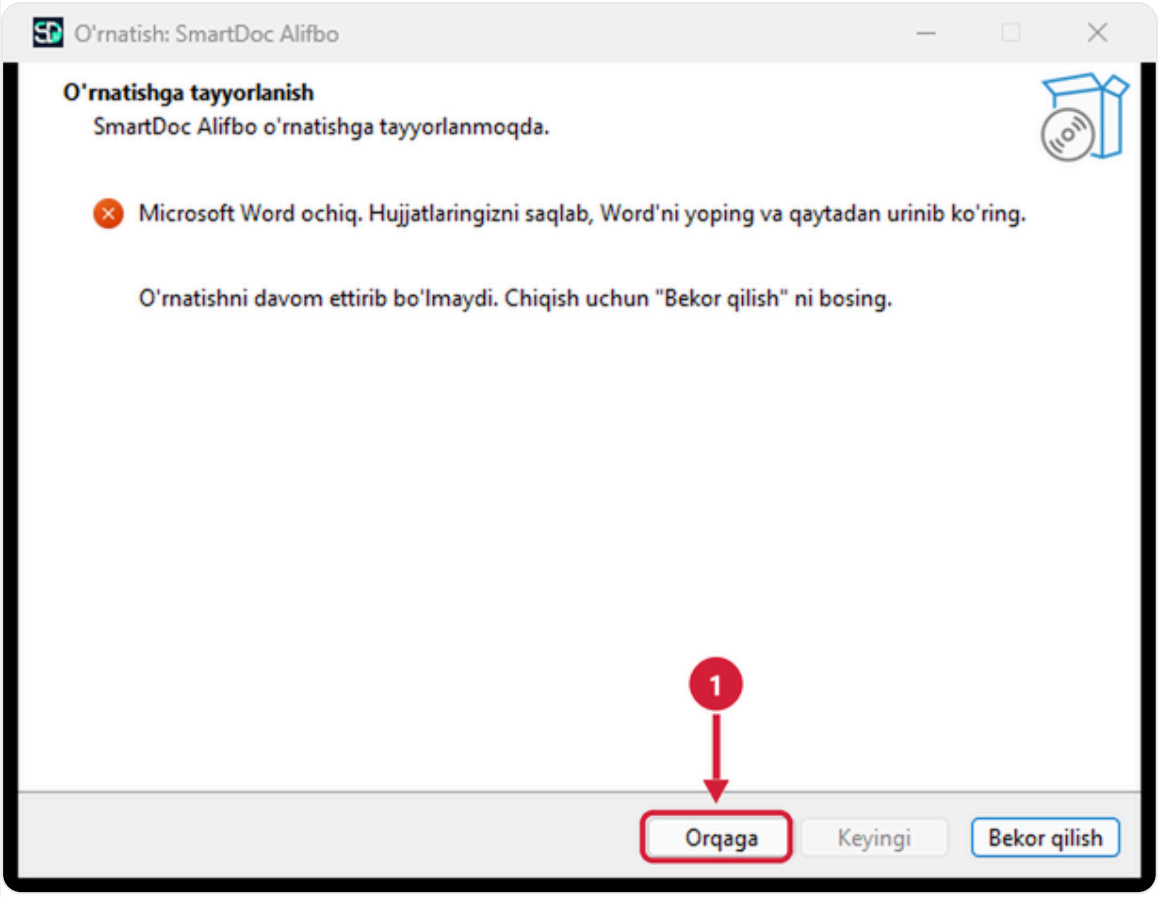

Read the terms, select «Shartlarni qabul qilaman» (I accept the terms) and press «Keyingi».

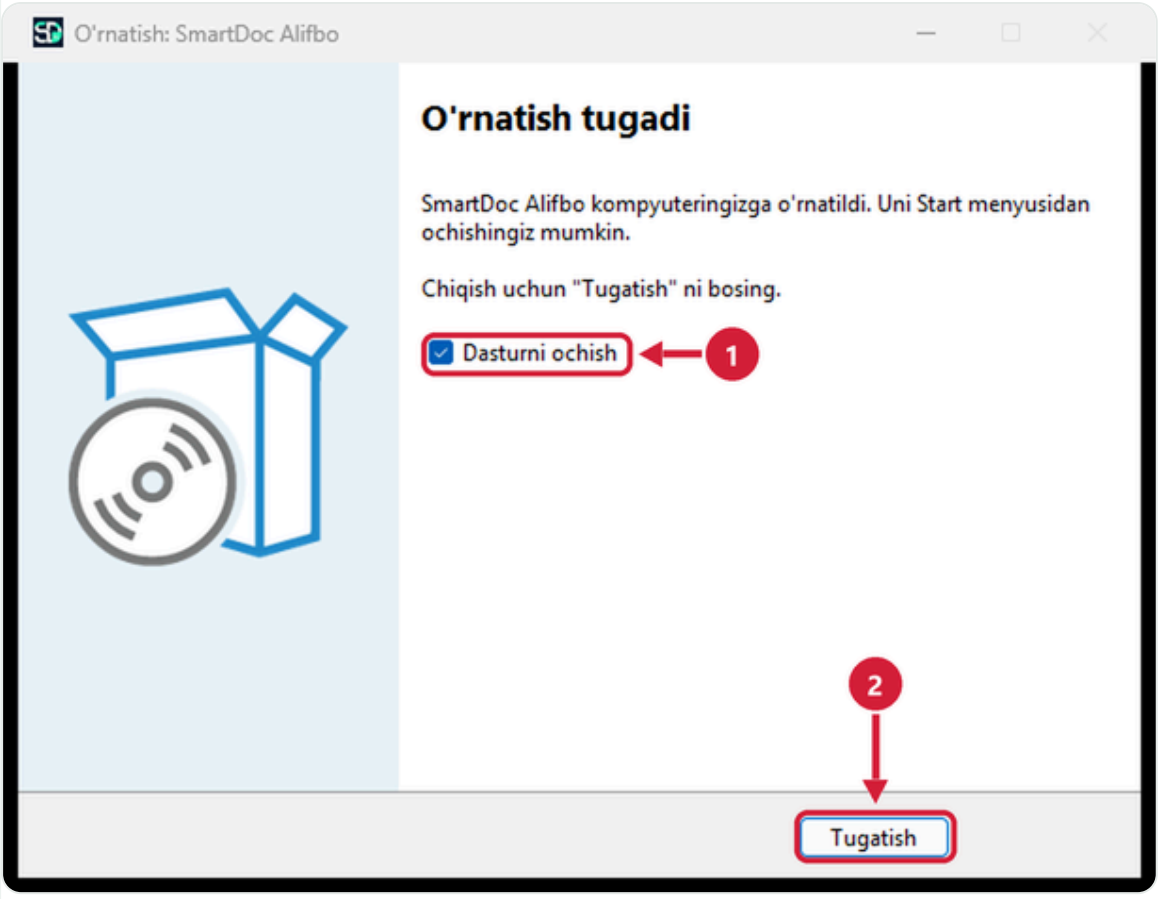

Choose the components. The Windows app is required, the Word and Excel add-ins can be removed. One licence covers all three. Press «Keyingi», then «O‘rnatish» (Install).

If you see «Microsoft Word ochiq» or «Microsoft Excel ochiq» (Word or Excel is open): save your document, close that program, press «Orqaga» (Back) and «O‘rnatish» again.

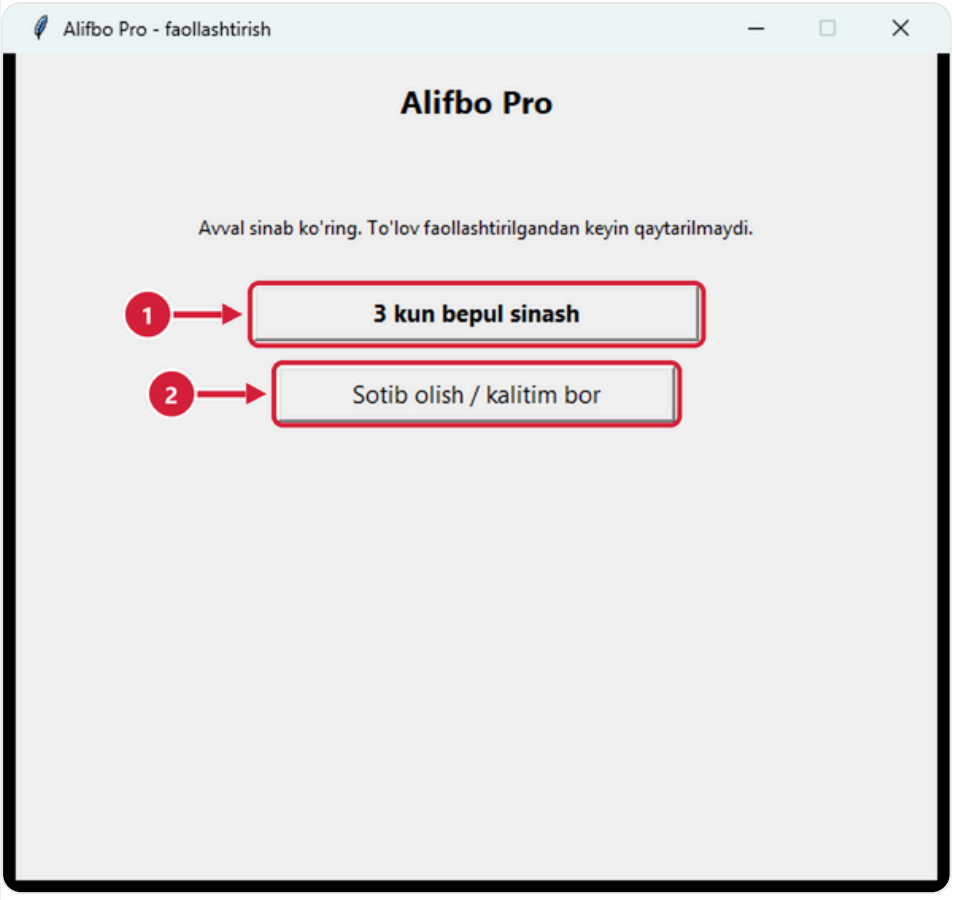

Keep «Dasturni ochish» (Open the app) selected and press «Tugatish» (Finish). Later the app opens from the Start menu.

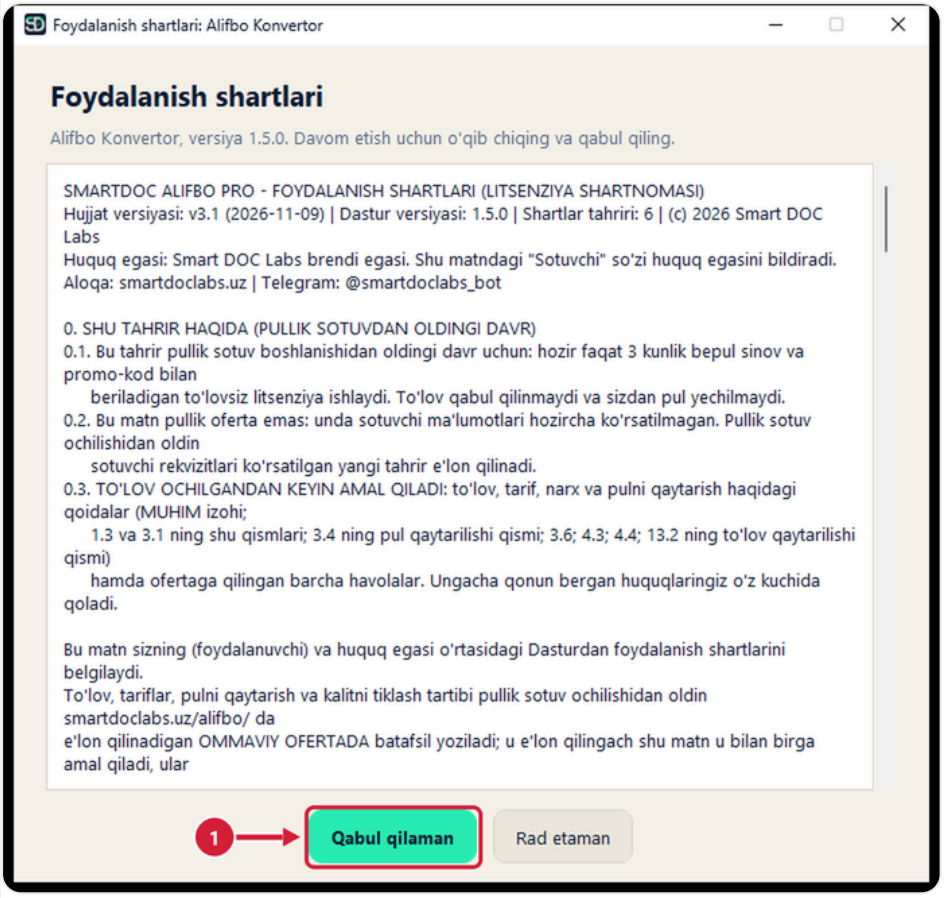

3. Try it

The first launch shows two buttons. To try it, press «3 kun bepul sinash» (3 days free): internet is needed once, up to 30 files in 3 days. If you have a promo code or key, press «Sotib olish /

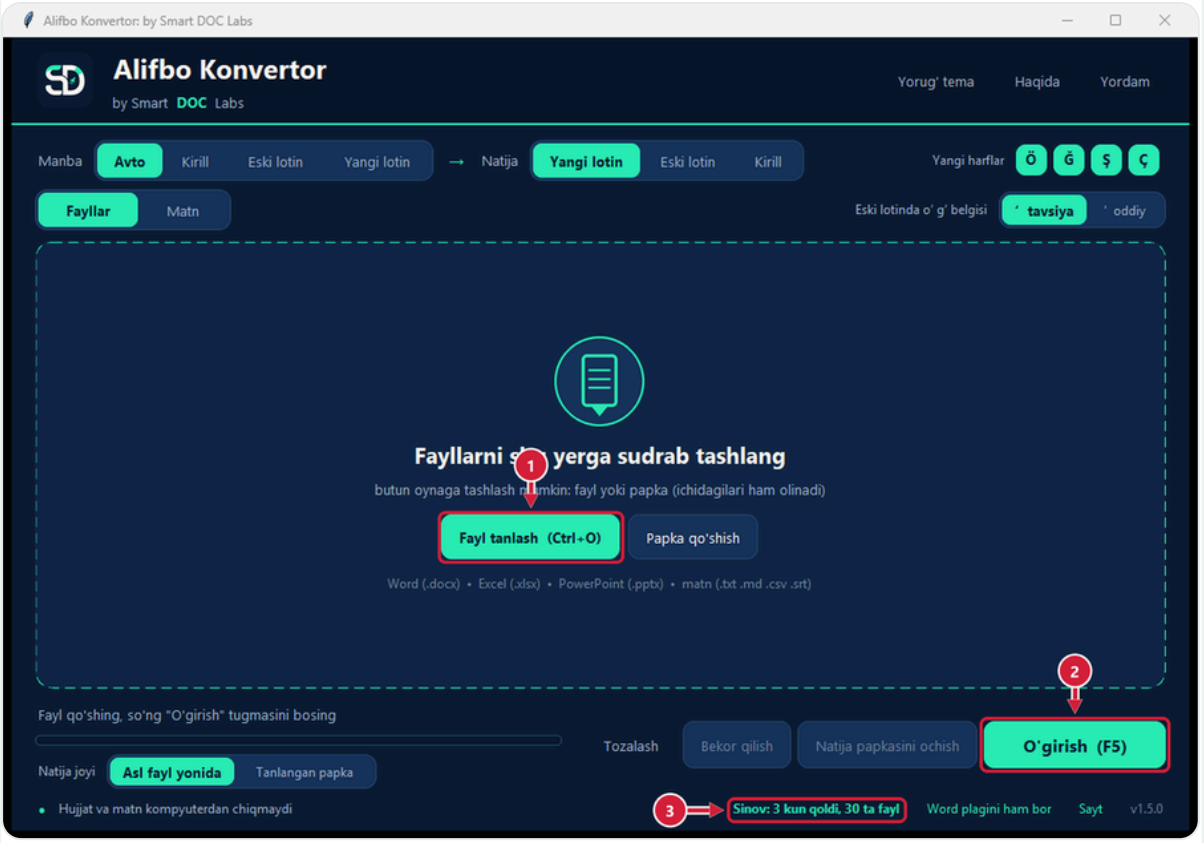

kalitim bor» (Buy / I have a key) and go to the next section.

Read the terms of use and press «Qabul qilaman» (I accept).

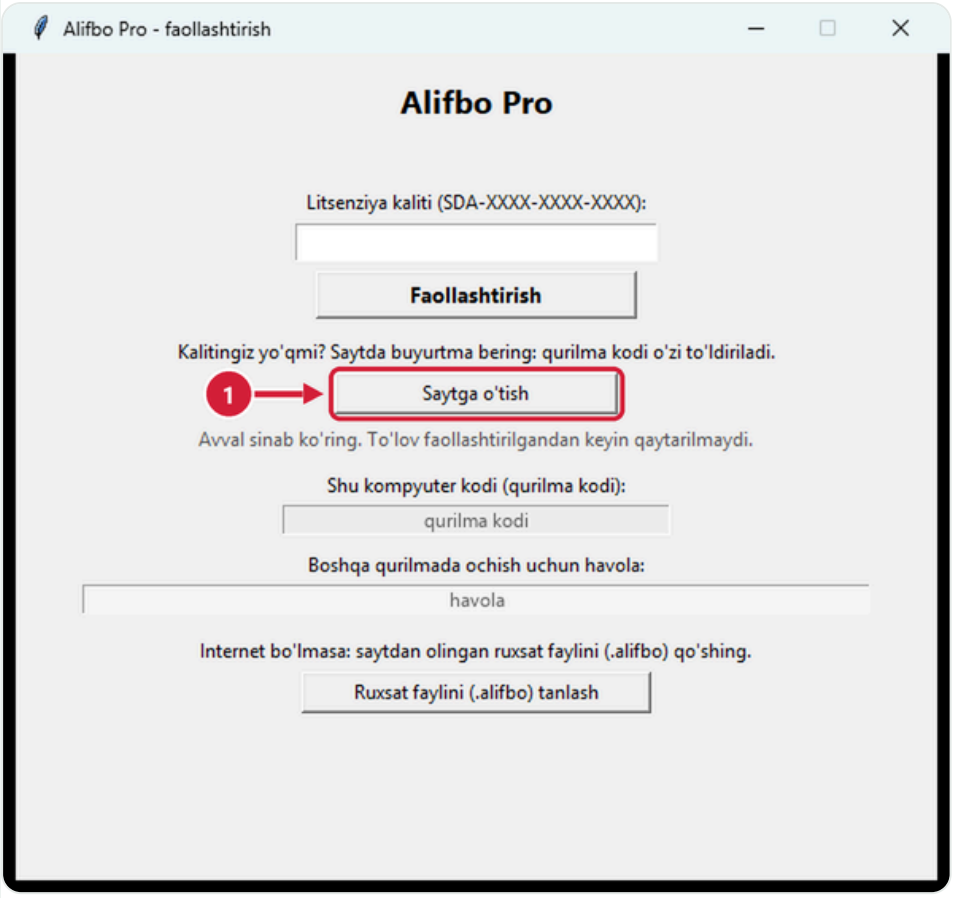

The app is ready. Drop a file on the window and press «O‘girish» (Convert). The remaining trial is shown at the bottom.

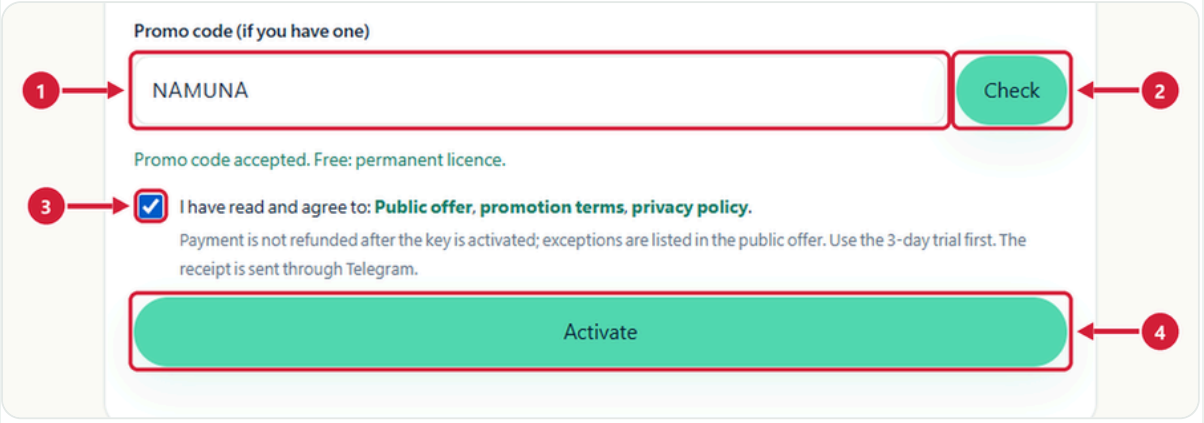

4. Activate with a promo code or key

In the «Sotib olish / kalitim bor» window press «Saytga o‘tish» (Go to site). The site opens with

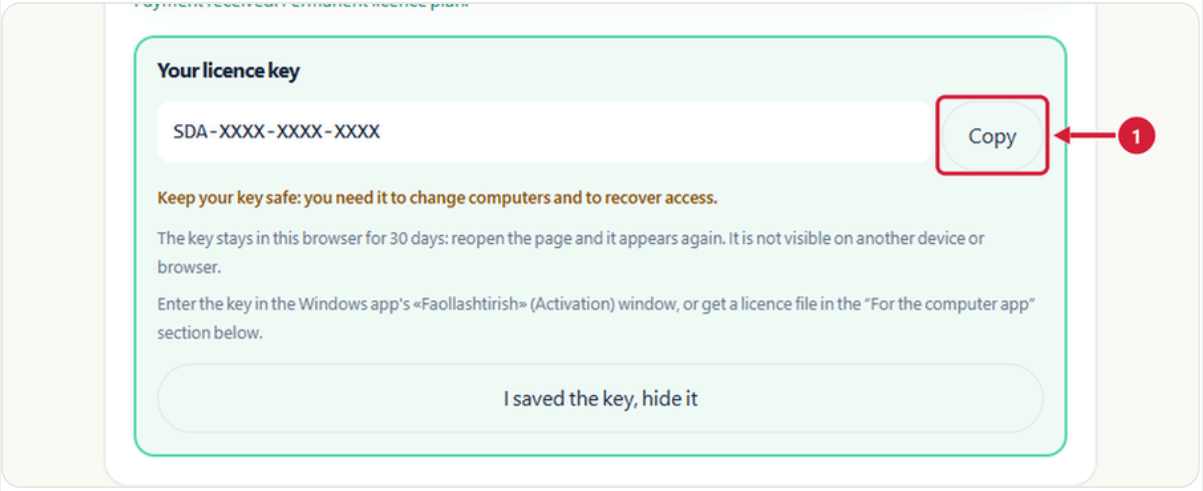

your device code. If you already have a key, go to step 4.

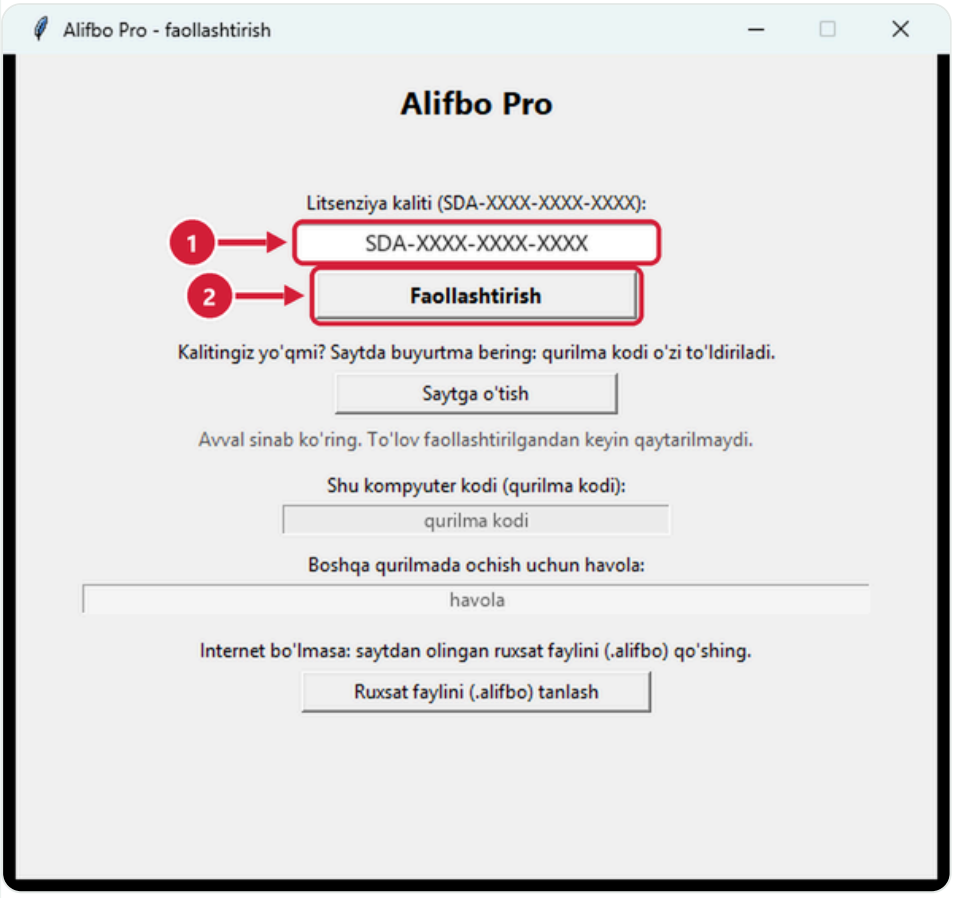

On the site enter the promo code, press **Check**, tick the consent box and press **Activate**.

The key appears. Press **Copy** and keep the key: it is not sent to the bot or the chat.

Go back to the app, paste the key and press «Faollashtirish» (Activate). Done: the app and the add-in work.

Getting a code: on the Pro page press «Leave a request in Telegram». We will contact you and send a code. Enter it in the «Promo code» field on the Pro page.

5. How to use: convert a document to the new alphabet

Open the app from the Start menu. At the top, «Manba» (Source) should be set to «Avto» (1) and «Natija» (Result) to «Yangi lotin» (2): the app detects Cyrillic and old Latin script by itself.

Drag a Word (.docx), Excel (.xlsx), PowerPoint (.pptx) or text file into the window or press «Fayl tanlash» (Choose file) (1), then press «O‘girish (F5)» (Convert) (2). With «Natija joyi» set to «Asl

fayl yonida» (Next to the original) (3), the result is saved as a separate file next to the original, with _yangi_lotin added to its name. The original file is not changed.

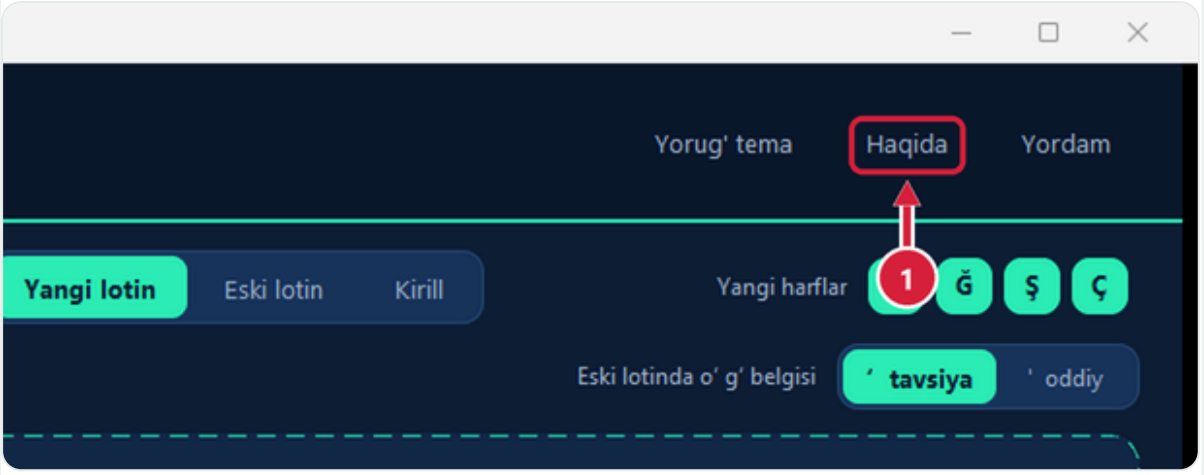

In Word: open the «Alifbo» section at the top (1) and press «Hammasi → Yangi» (2): the whole document is converted to the new alphabet. If you don't like the result, undo with Ctrl+Z.

In Excel: open the «Alifbo» section (1), choose «Avto → Yangi lotin» in the «Yo'nalish» (Direction) list, then press «Belgilangan» (Selection), «Varaq» (Sheet) or «Kitob» (Workbook). «Kitob» converts the whole file. Formulas, numbers and dates are not touched; undo: Ctrl+Z.

Check the result: look over names, terms and abbreviations. A Russian word written in Cyrillic may also be converted to Latin. Keep the original of an important document.

6. Changing computer, removal, questions

Changing computer: on the old computer press «Haqida» (About), then «Bu kompyuterdan o'chirish» (Remove from this computer), internet is needed. Then enter the key on the new one. If the old computer is lost, use the **Release all devices** section on the Pro page.

Removing the app: find SmartDoc Alifbo in Windows Settings and uninstall it. This does not release the licence: if needed, press «Bu kompyuterdan o'chirish» first.

Questions: **@smartdoclabs_bot**, we reply within 24 hours.
